<b>PROJECT NAME</b>	Efficient Water Quality Analysis & Prediction using Machine Learning

## FLASK APP

```
C:\Users\sai\ch\Desktop\deployment_copy1>python app_ibm.py
* Serving Flask app 'app_ibm'
* Debug mode: on
WARNING: This is a development server. Do not use it in a production deployment. Use a production WSGI server instead.
* Running on http://127.0.0.1:5000
Press CTRL+C to quit
* Restarting with stat
* Debugger is active!
* Debugger PIN: 146-057-255
```

Output:

The screenshot shows a web browser window titled "WATER QUALITY ANALYSIS" with the address bar displaying "127.0.0.1:5000". The web page has a light blue background with a water splash image. The title "WATER QUALITY PREDICTOR" is centered at the top, with the subtitle "using random forest algorithm" below it. The form contains several input fields for water quality parameters, each with a label above it: "ENTER YEAR", "ENTER TEMPERATURE", "ENTER DO", "ENTER pH", "ENTER CONDUCTIVITY", "ENTER THE BOD", "ENTER NI", "ENTER Fec\_col", and "ENTER tot\_col". Each input field has a placeholder text indicating what to enter. At the bottom center of the form is a blue "SUBMIT" button.
