## Project Design Phase-II Solution Requirements (Functional & Non-functional)

Date	03 October 2022
Team ID	PNT2022TMID52107
Project Name	Efficient water analysis prediction using machine
	learning.
Maximum Marks	4 Marks

## **Functional Requirements:**

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	User can enter their details using login form
FR-2	User Confirmation	Conformation via Email
FR-3	Authorization level	A security question will be displayed to the user to verify the details.
FR-4	Reporting	<ul><li>1.Result of the water quality analysis will be sent a message to the user.</li><li>2.The real time water quality report is collected and the dataset is used to predict the water quality for future works.</li></ul>
FR-5	Business rules	Water Quality Index(WQI) formula will be used for the water quality analysis and prediction.

## **Non-functional Requirements:**

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	Allow user to identify missing data elements
		available in the water quality portal data.
NFR-2	Security	Authorization via Email.
NFR-3	Reliability	Our model will accurately report the uncertainly in the prediction.
NFR-4	Performance	The system effectively compares the input parameters given by the user with the dataset.
NFR-5	Availability	Our model will keep working and be available for work even if there is an infrastructure failure
NFR-6	Scalability	High mineral levels are found in water as well as Water Quality Index (WQI) are accurately predicted.
